

Contract Series

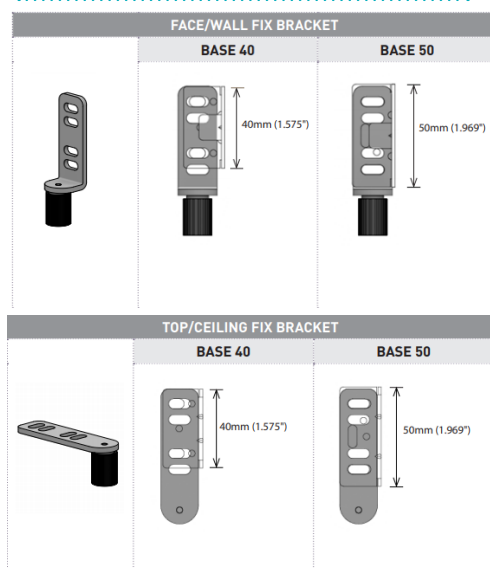

INTERNAL WIRE GUIDE

The Internal Wire Guide solution allows you to easily secure your roller shade fabric panel to enable it to follow a sloped facade or to keep the fabric panel stable in windy locations. Our Internal Wire Guide offers the ideal solution for commercial applications where panel movement must be limited or controlled. Controlling panel movement also assists long shades during roll up and helps prevent telescoping on the shade tube. For absolute control of your shade panels, choose Contract Series Internal Wire Guide.

FEATURES AND BENEFITS

- Tensioners available to suit Ceiling, Wall, or Floor mount applications.
- Adjustable wire barrel attachment.
- Wire guide end caps compatible with D30 Silent Bottom Rail, and F4115 and F56 Heavy Duty Hem Bars.
